

Endoline Hand Packing Stations are ergonomically designed to reduce the effort required to hand pack a wide variety of products. Investing in a hand packing station can provide significant short-term savings and each system can be upgraded by integrating with any Endoline erecting, forming or sealing machine.

Features of our Hand Packing Stations include:

Increased Productivity

Hand packing has many advantages such as quality control, flexibility and high efficiency and customers may not be aware of the high levels of productivity available with a well designed hand packing station.

Flexible

Endoline has produced hand packing stations that provide significant savings for products as diverse as snacks bags, roll wrap biscuits, flow wrapped confectionery, tubs of pet food, bottles of juice and cartons of ready meals.

Ergonomic

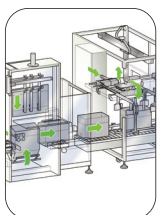

The basic principle is to arrange people, products and packaging to be in the right place at the right time to enable hand packing to be efficient and ergonomically acceptable regardless of the product.

Cost Effective

Investing in a hand packing station can save up to 50% on labour required to manually pack.

Modular

Endoline's modular product range allows the system to be developed in line with the needs of the customer. Easily integrated with any of Endoline's erecting, forming or sealing machines the hand packing station can be upgraded to become a fully automatic system over time.

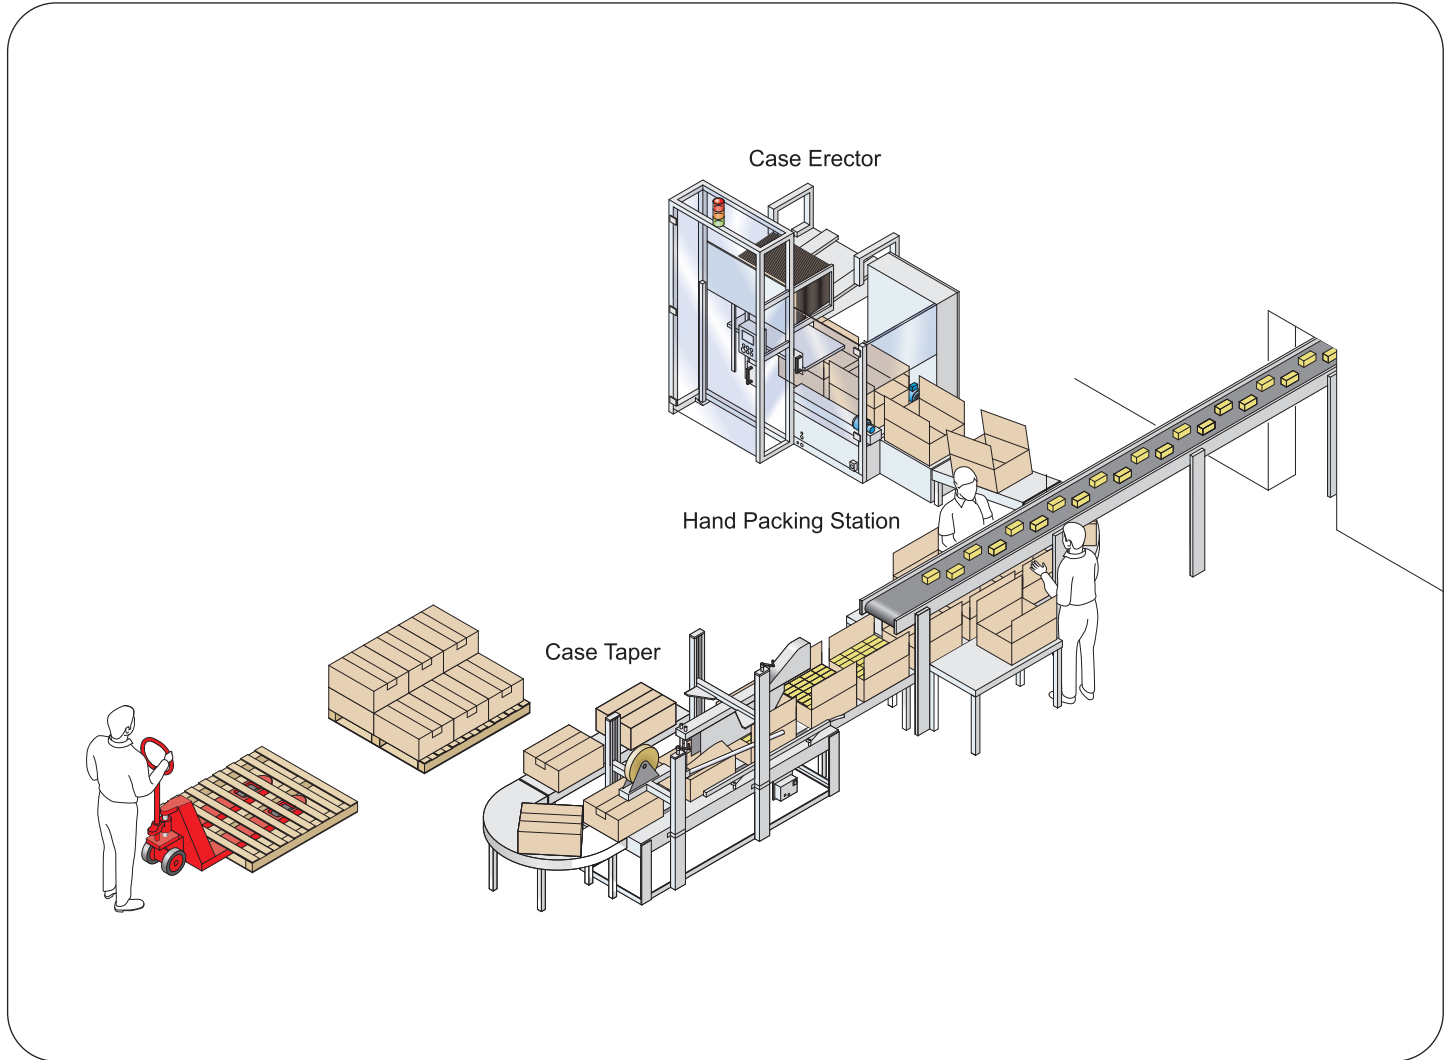

Versatile

Designed to suit individual requirements and take in to account inserts that may need to be added into the container as well as coding and labelling.
